

Image 1: Serial communication cable

- Used to communicate the PR330 / PR-Sport ECUs with Pro Tune Workbench PRO software
- Length: 3,40 m
- Noise suppression

General

This cable has an 8-way female connector that must be connected to the ECU harness and a USB output for connection to the computer. The Serial Cable can be used with the entire Pro Tune ECU line and with the CB1204. This cable has superior immunity to noise when compared to a standard USB cable.

The ECUs Pro Tune PR330 / PR-Sport requires the Serial Cable to be connected to the computer. The 8-Way connector must be connected to the 8-way ECU harness outlet.

Technical Specifications

Communication

Serial communication protocol
(Pro tune SP)

Electrical characteristics

Supply voltage: 8 – 15 V

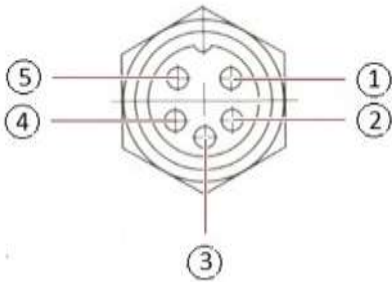

Mechanical characteristics

8-way female MIKE connector

USB connector

Weight: 60g

Total cable length: 3,40 m

Pin	Function
1	Ground
2	12V
3	-
4	Rx
5	Tx
